

Laser Mast Slick Strips and Base Wear Plate

The Laser Slick Strips #3947 are a class legal remedy to reduce excessive wear of the mast step wall of your Laser hull. These strips are adhered to the mast. Pair these with a class legal stainless steel plate #1519 tossed into the mast step base and reduce the excessive wear from the mast rotating in the mast step, while aiding with freer rotation.

Besides these protective measures it is always important to keep the mast step clean and free of sand and dirt that could be blown into the step, or get on the end of the mast while rigging and then transferred into the mast step and deck area. Also, after capsizing where the mast may touch the lake bottom, dirt will wash down the mast sleeve of the sail and get into the step. When you return to shore take the time to clean all the parts of the boat that were affected to minimize wear in the step afterwards, even rinse the inside of the lower mast section.

Slick Strips \$7.95 (pair)

Base Plate \$6.15 (each)
